

# 2003 Nigeria São Tomé & Príncipe JDZ Consortium Program

TDI-Brooks International in association with Global Energy Co. Ltd. and the Joint Development Authority is pleased to announce the availability of the **2003 Nigeria São Tomé & Príncipe JDZ Surface Geochemical Exploration (SGE) and Heat Flow (HF) Program**. Acquisition of this program will be completed in June 2003. Reports will be available in late July.

This program follows on five (5) successful consortium SGE and HF programs in the adjacent Nigerian deep and ultra deepwater regions over the last five years as well as similar studies elsewhere in West Africa. All the major international exploration companies have participated in these successful TDI-Brooks West African SGE and HF programs. The Tertiary delta continental margins of West Africa have been excellent environments for SGE and HF studies providing important information to constrain risk by delineating charge and oil types ahead of the drill bit. The heat flow measurements provide critical information to help constrain thermal maturity models in these deep water, frontier regions.

The program consists of the acquisition of approximately 75-80 cores and 15 heat flow sites selected by the Early Participants. Pricing for this program if committed before 30 June is \$100,000 US. For further information please contact Dr. James M. Brooks at 1-979-696-3634 or via e-mail at [drjmbrooks@aol.com](mailto:drjmbrooks@aol.com)
